MacuHealth®

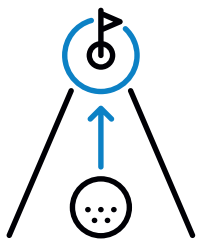

# THE PROBLEM

## BLUE LIGHT DISTORTION

- ① Blue light from sunlight or stadium lights causes blurriness, lack of eye focus and difficulties tracking the golf ball.
- ② Light from the clouds scatters into the sight path, causing distortion.

## How Vision Influences Your Game\*

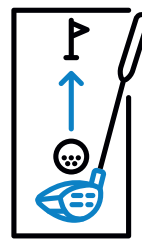

### Depth Perception

Used to assess yardage and green conditions to help with proper club decisions

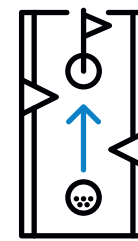

### Eye Focusing

Assists with putting performance by allowing you to shift focus between near and far distances

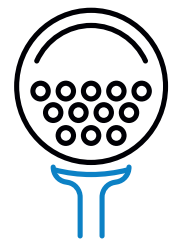

### Eye-Hand Coordination

Enables accurate timing and allows you to react to incoming visual information

### Eye Tracking

Allows you to follow the golf ball as it flies toward its target

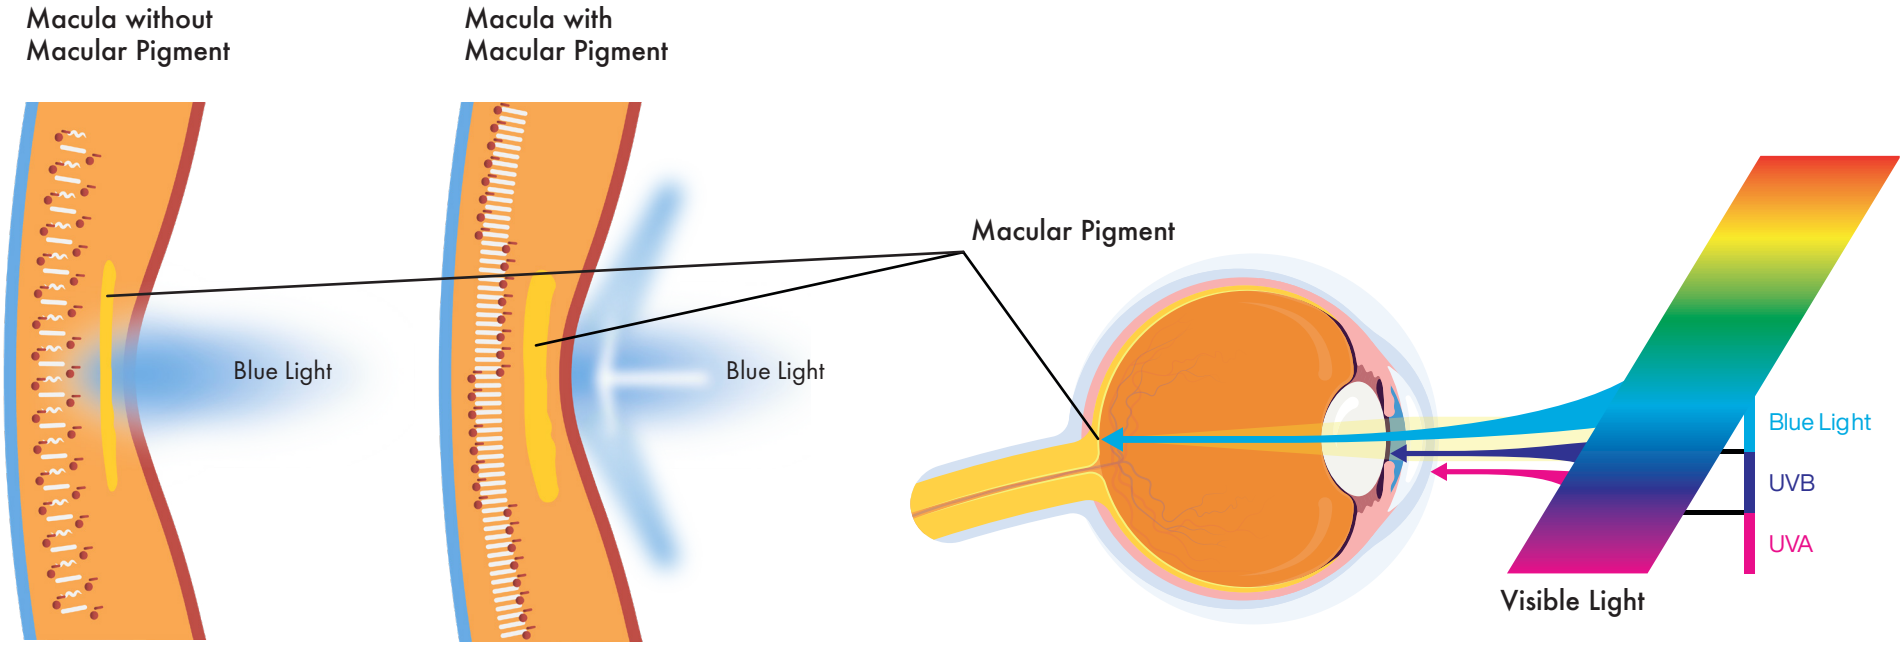

### Visual Fixation

Helps you to focus on an object for long periods to help you with hitting and stroke techniques

# BLUE LIGHT FILTRATION

## THE MACULA

The Macula affects 90% of your total visual performance.

# ULTIMATE PERFORMANCE

## VISION EDGE PRO ADVANTAGES

- ① Improves object detection
- ② Optimizes vision in low light, fog or glare conditions
- ③ Reduce photostress recovery time
- ④ Protect retinal tissues from high-energy visible light
- ⑤ Enhance neuronal communication

BEFORE

AFTER

---

Increased Macular Pigment levels in the eyes and brain can lead to improvement with visual and cognitive functions.
